What Makes Bosch Dishwashers Wash Better?

“Quality is in the details”

Don't be fooled by its quiet demeanor, this kitchen workhorse was created by Bosch to make your dishwashing life easier and better.

“We're watching over your kitchen, even when you're not.”

Our **24/7 Overflow Protection** senses leaks even if the dishwasher is turned off and pumps the water out.

What happens in our wash system?

The Bosch wash system is precisely engineered to clean even the toughest to wash grease and grime.

- 1. Detergent Dispenser** - Drop your tablet into detergent tray.
- 2. Detergent Tray** - Tablet will drop at the scheduled time maximizing detergent dissolution and performance
- 3. Spray Arms** - Laser cut spray arms aim water into the basket dissolving the tablet.
- 4. Sparkling dishes with no fuss!** Detergent is optimally used vs. dropping to the bottom of the tub (like our competitors.)

BOSCH Ascenta Dishwashers

Bosch has 5 of the top 10 drying scores in more than 160 tested dishwashers*

What makes Bosch Dishwashers dry better?

- 1 We don't need vents
- 2 Put plastics anywhere
- 3 We save more energy

The Bosch condensation drying system is brilliantly designed to elevate dish drying to a new level.

1. High temp. final wash

2. Evaporation on the stainless steel walls

3. Water condensates and drains away

4. Resulting in Dry Dishes!

- 1 Condensation Dry does not require vents – other competitors require back fans and vents to aid in drying, which typically results in dusty air circulation and less sanitized conditions in your dishwasher
- 2 Having a flow through water heater means no exposed heating element is required which means no HOT SPOTS
- 3 Even with a final hot water rinse, less energy is used versus an exposed heating element

Give your kitchen towels the vacation they deserve
